2

errors in the last hour

12

alerts sent in the last hour

Memory 1588 of 3908 MB used. Load average 3.05, 5.29, 4.45. Routine feed reconnects in the last hour: 12. Every service is running.

1. Services

Service	State	Running for	Restarts	Memory
s1-harness	RUNNING	2.3 days	0	25 MB
s1-trader	RUNNING	2.3 days	0	22 MB
s9-watcher	RUNNING	2.3 days	0	167 MB
bme-capture	RUNNING	2.3 days	0	377 MB
s3-maker	RUNNING	1.1 days	0	29 MB
s2-collect	RUNNING	54 min	28	20 MB
s46-harvester	RUNNING	1.2 days	0	30 MB
s5-collector	RUNNING	4.0 h	1	117 MB
s8-router	RUNNING	1.1 days	0	13 MB
s10-box	RUNNING	1.1 days	0	30 MB
s1-monitor	RUNNING	35 min	0	659 MB
ms-us-recorder	RUNNING	1.8 h	0	30 MB
ms-nws-watch	RUNNING	1.8 h	0	62 MB
ms-regime-watch	RUNNING	1.4 h	0	31 MB

s2-collect and s5-collector restart on purpose at the end of each recording session, so their restart counts grow by design.

2. Strategies

S1 TWAP Lock-In	
observer + DRY trader. Records every BTC 5m/15m round and tests which settlement rule Polymarket really uses (verdict: end-value, not the average). Trader is hard-blocked from live.	
Last hour	no dry signals
Rounds recorded	2537
Rule check: full-round average	matched 2137/2516 rounds
Rule check: end value	matched 2499/2516 rounds
Where the two rules disagree	374 rounds: full-avg 6, end-value 368
Dry ledger	n=133 wr=83% pnl \$+23.75
Live trading	BLOCKED

S9 Whale Coattails

watches 4 pro wallets and measures whether copying them would pay (measure-only; so far it does not).

Last hour	11 follow outcomes, 0 signal cross-checks (0 won / 0 lost), 0 data gaps
Feed lag	2s
Wallet ce25-unnamed	follows=3259 rounds=3245 win=18% EV=-0.323
Same side as our signal	{"gabigol": "95/236", "ce25-unnamed": "177/236", "13e0-longshot": "98/236", "gabagool22": "0/236"}

BME Book-Movement Engine

records every order-book move on the BTC 5m/15m markets (~1,000/s) to score 5 pre-registered signals after 7 full days.

Last hour	+78 MB gz, 9338 book-state rows, reconnects 1
Today's file	964 MB
Disk free	168.5 of 193 GB (87%)
7-day gate	day 7 of 7 (complete, 7 days recorded)

S3 Fee-Farm Two-Sided Maker

rests a buy at 0.45 on BOTH sides of each BTC 5m/15m round during quiet hours, keeps completed pairs (0.90 -> 1.00), cuts stray legs after 20 s, and pulls its quotes on liquidation cascades / spot jumps (Moon Dev feed). DRY: fills are simulated from the public tape.

Last hour	16 quotes, 0 dry fills in 0 rounds, 0 pairs, 0 cuts, pulls BAND_EXITx5, SPOT_MOVEx2, LIQx1, skipped rounds 16 (price outside the quoting bandx16), errors 1
Trading session	quiet (quoting allowed)
Heartbeat	0 min ago
All-time	rounds 448 fills 3 pairs 0 pnl \$-1.84 day \$-2.25 adverse \$2.36 / gross \$0.51
Moon Dev key	key OK (1331 liq rows in 10 min)
Mode	LIVE=no (DRY) KILL=no

S2 Open-Print Displacement (research recorder, NO orders)

10 s after each BTC 5m/15m round opens it records the Chainlink spot vs the open, the TWAP feed, and the order book on the displaced side, then applies the strategy gates (5/8 bps move, ask <= 0.60, 2 s freshness) and logs a hypothetical candidate or the skip reason. Outcomes are joined later for replay.

Last hour	ticks spot 3558 / twap60 3555 (last tick 1s ago, feed lag 1.50s), 18 samples, 0 hypothetical candidates, skips spot_stalex13, noise_zonex5, errors 0, session restarts 1
Sessions on disk	29, data 27 MB
Current session	20260927T130633Z-761594
Mode	KILL=no

S8 Session Regime Router (gate, NO orders)

decides which strategies may trade right now from the clock (Asia 00-12 UTC and weekends = makers on; US 13:30-21:00 = takers on, makers off), a hardcoded US macro calendar (blackout +/-1 round around releases: everything off) and trailing 1 h volatility (>10.5 bps flips to US mode). S3 asks it before every quote.

Regime	US_VOL_OVERRIDE (Realized-vol override: trailing 1h sigma 11.1bps > 1.5x base)
State age	0 s old
Volatility	11.08 bps [kraken_1m] override ON
Allowed now	S1, S2, S4, S5
Blocked now	S3, S6, S10
Next macro event	Initial Jobless Claims in 94.5 h
Regime changes this hour	ASIA->US_VOL_OVERRIDE 13:43Z
Errors	0
Mode	KILL=no

S46 Paired = S6 coin-flip maker + S4 Liquidation Cascade Continuation (15m only)

the same \$1.5M/10 s liquidation cascade that pulls the S6 quotes is S4's entry signal - if spot confirms the direction by 2 bps and the 15m continuation side still asks <= model odds minus fee minus 2c, S4 buys it (taker) and holds to resolution. DRY: no real orders; S4 triggers are rare on a quiet tape by design.

Last hour	22 quotes, 0 dry fills in 0 rounds, 0 pairs, 0 legs held (settled 0 won / 0 lost)
Kill-test sample	Up 0 legs (0 won), Down 0 legs (0 won) of 300 needed, pulls BAND_EXITx8, SPOT_MOVEEx2, skipped rounds 7 (price outside the quoting bandx7), errors 0
Trading session	quiet (quoting allowed)
Heartbeat	0 min ago
All-time	rounds 447 settled (0 with a fill) fills 0 pairs 0 pnl \$+0.00 day \$+0.00 adverse \$0.00 / gross \$0.00
Moon Dev key	key OK (199 liq rows in 10 min)
Mode	LIVE=no (DRY) KILL=no
S4 last hour	0 cascades seen, 0 triggers, 0 dry fills
All-time	triggers 0 fills 0 settled 0 wins 0 pnl \$+0.00 by size {'1.5M': 0, '2.5M': 0, '4M': 0, '8M': 0}
Cascades logged	0

S5 Wick Fade / Tape-Lag Reversion (research recorder, NO orders)

records every Kraken BTC trade and every Polymarket order-book change for the current 5m round, so a replay can find sharp spikes that snap back within seconds (wicks) and measure whether the Up/Down quotes lagged. No fair-value model exists yet, so all entries are blocked by design.

Last hour	2485 Kraken trade msgs (last 2s ago), 1216499 book msgs (last 0s ago), 12 rounds discovered, 0 feed errors, 0 session start/stops
Today's file	1392 MB, data 3000 MB (1 earlier day files), 116 MB/h -> 2.7 GB/day
Disk free	168.5 of 193 GB (87%)
Mode	KILL=no
Entries	blocked by design (no fair model)

S10 Vol-Event Binary Box ('own the whipsaw, don't guess it')

stays flat until a US macro release (8:30 / 10:00 / 14:00 ET, weekdays) or a volatility spike arms 'box mode'; then rests a buy at 0.45 on BOTH sides of the BTC 15m (and 5m) round and buys both sides outright whenever the combined ask is under \$0.97 after fees. A lone filled leg is chased within 60 s or unwound - it never carries a naked position. DRY: no real orders, fills simulated from the public tape.

Last hour	box armed 4 (volx4), disarmed 3, 14 maker quotes, 0 dry fills, 0 pairs, 0 pair-arb fires (0 too thin), 0 chases, 0 unwinds, pulls SPOT_MOVEx8, BAND_EXITx4, skipped rounds 10 (box mode disarmed (no event / no vol)x9, mid # outside box bandx1), errors 0
Heartbeat	0 min ago
Kill-test	16 armed events of 20, two-leg 0 (0%, kill <30%), pair gains \$0.00 vs unwind losses \$0.00
Volatility	baseline 2.9 bps (peak 6.2)
All-time	pnl \$+0.00
Moon Dev key	key OK (231 liq rows in 10 min)
Mode	LIVE=no (DRY) KILL=no

3. Measurement stack (read-only research)

US round recorder	heartbeat 26 s ago; 145 venue frames in the last minute; exchange books live: bitstamp, coinbase, gemini, kraken; rounds closed since start 8, divergences 0
Settlement calculator check	1 of 200 rounds compared, agrees on 1 (100.0 %). Verdict: NOT READY: fewer than 200 comparisons
Weather watcher	heartbeat 3 s ago; 60 of 60 temperature markets quoted; forecast updates seen 8; buy-every-bucket flags 0; NWS call errors 0
Rule-change watcher	heartbeat 591 s ago; sources healthy 12 of 12; changes in the last cycle: none
7-day backtest (S1, true labels)	78 trades, 75.64 % wins against 82.58 % needed, net \$-56.57 after fees. Public labels disagreed with the blockchain on 254 rounds.

4. Errors and alerts in the last hour

Source	Lines	Most common	Most recent line
S3 fee-farm maker	1	1x moondev liq error JSONDecodeError('Expecting value: line # column # (char #)')	[13:54:28Z] moondev liq error JSONDecodeError('Expecting value: line 1 column 1 (char 0)')
S10 vol-event box	1	1x moondev liq error JSONDecodeError('Expecting property name enclosed in double quotes: line # column # (char #)')	[13:35:07Z] moondev liq error JSONDecodeError('Expecting property name enclosed in double quotes: line 1 column 32761 (char 32760)')

Routine feed reconnects	Count	What happened	Last at (UTC)
BME book recorder	6	server dropped a slow connection, reconnected	13:47:10
S1 trader	3	feed went silent, watchdog reconnected	13:49:53
S1 observer	1	feed went silent, watchdog reconnected	13:50:21
S3 fee-farm maker	1	server closed the connection, reconnected	13:59:24
S10 vol-event box	1	server closed the connection, reconnected	13:22:07

These are not errors. The price and order-book servers close connections from time to time and every recorder reconnects by itself within seconds.
